DOOR SHOWCASE VOL. 2

REPLICATED HISTORICAL STOREFRONT DOORS

- DOOR/TRANSOM DESIGN MATCHING CUSTOMER SPECIFICATIONS
- FACTORY SUPPLIED & INSTALLED COMMERCIAL HARDWARE
- LINEAL CASINGS, TRIM, AND MULL COVERS

Overview photo of the six (6) wide storefront door system that was replicated by Parrett.

Parrett has the capabilities to perfectly replicate any historic storefront. The storefront on 60-66 White Street is an excellent example of Parrett showcasing our superior oversized door construction methods, tight radius trims, and factory supplied and installed commercial hardware packages.

The swing doors on this project were over 10 feet tall excluding the transoms. The triple pane glass (3/16" pane thickness) also added considerable weight to the door sashes. However, Parrett's time-tested, high quality construction methods ensured that these doors operated smoothly once installed in the field.

All door and transom profiles were replicated as seen in the photo at right. A variety of casings and other trim pieces were also manufactured, painted, and sent as lineal components to facilitate jobsite installation.

Adler Windows worked with Parrett to ensure that the storefront doors met the specifications required for historic replication, and also expertly installed the door units.

Commercial Hardware Specifications

Parrett has extensive experience in sourcing and installing commercial door hardware available from an unlimited array of manufacturers. Parrett provides architectural door signoff drawings showcasing the hardware as specified by the customer. All door systems are fully tested prior to leaving the Parrett factory, ensuring that everything is operating optimally.

Details of commercial hardware specified on this project.

Clockwise from top left:

1. Door Closer Hinge & Sill Brush Seal
2. Commercial Door Pull
3. Panic Bar Hardware
4. Closer (Header)
